

EC Declaration of Conformity to: Medical Device Regulation (MDR) 2017/745

Legal Manufacturer:	Keeler Ltd Clewer Hill Road, Windsor, Berkshire SL4 4AA United Kingdom
SRN:	GB-MF-000009031
Manufacturing Site(s):	Keeler Ltd Clewer Hill Road, Windsor, Berkshire SL4 4AA United Kingdom
EU Authorised Representative:	Visiometrics, S.L., Vinyals, 131 08221 Terrassa, Spain
SRN:	ES-AR-000001559
Swiss Authorised Representative:	Medicel AG Dornierstrasse 11 CH-9423 Altenrhein Switzerland
Device Description/Family:	Direct Instruments & Accessories (See attached Product Schedule)
Basic UDI-DI:	Ophthalmoscope - 50552727OPHTHALMOSCOPES39 Otosopes - 50552727OTOSCOPESVJ Retinoscope - 50552727RETINOSCOPESD7 Bespoke sets (GMDN 45084) - 5055272745084XR
EC Product Classification:	Class I -Self certified, Annex VIII, Rule 10 under MDR 2017/745
EC Conformity Assessment:	Annex II and III Technical Documentation + Annex IV Declaration of Conformity
Intended Purpose	<u>Ophthalmoscope</u> The Keeler Ophthalmoscope is indicated for examining the posterior segment of the eye referred to as the fundus, in order to aid in the screening and diagnosis of retinal pathology including, but not limited to, diseases such as cataracts, papilloedema, glaucomatous disc cupping, diabetic retinopathy, hypertensive retinopathy and retinal detachments. When set to a high power and magnification, it can also be used to examine the anterior segment of the eye, which includes the eyelids, cornea, sclera, conjunctiva, iris, aqueous, crystalline lens and anterior vitreous. <u>Retinoscope</u> The retinoscope is indicated for the objective assessment of refractive state of the eye. By observing the retinal red reflex, it is also a means to providing information regarding the visual system, for example media and lens opacities, significant ocular aberrations and accommodative status. <u>Otoscope</u> The Otoscope is indicated for the examination of health of the external auditory canal, the tympanic membrane and the middle ear. Otoscopy can aid in the detection of ear conditions, including but not limited to earache, ear infection, hearing loss, ringing in the ears, inflammation and foreign bodies.
GMDN Code:	46786 – Direct Ophthalmoscope An electrically-powered, hand-held, ophthalmic instrument designed to be held close to the patient's eye to examine the interior of the eye and related

	structures [e.g., fundus (retina), cornea, aqueous, lens, and vitreous] by producing an upright (unreversed) image of approximately 15 times magnification. It consists of a main unit (commonly referred to as the head) with a built-in light source directed through the pupil to illuminate the interior of the eyeball, a mirror with a single hole for viewing, and a dial containing lenses of different powers; a dedicated power supply handpiece may be included with the head. 32712 – Retinoscope, battery powered A battery-powered, hand-held, ophthalmic instrument that is used to measure the refractive errors of the eye through the projection of a beam of light into the eye, and the observation of the movement of the illuminated area on the retinal surface and of the refraction of the emergent rays. The batteries may be of the rechargeable type and are housed within the handle of the instrument. Also known as a skiascope and the method as sciascopy. 46784 – Retinoscope, line-powered A mains electricity (AC-powered), hand-held, ophthalmic device that is used to measure the refractive errors of the eye through the projection of a beam of light into the eye, and the observation of the movement of the illuminated area on the retinal surface and of the refraction of the emergent rays. The current power is run through a transformer for reduction to low voltage. Also known as a skiascope and the method as sciascopy. 12849 – Otoscope, direct An electrically-powered, hand-held device designed for examination of the outer ear canal and tympanic membrane (eardrum) by direct viewing through the ear opening. It consists of a main unit (commonly referred to as the head) with a built-in light source intended to illuminate the interior of the ear canal with a detachable cone-shaped tube (speculum) inserted in the ear canal; it may facilitate the application of air pressure for pneumatic otoscopy. A dedicated power supply handpiece and/or an insufflation bulb may be included with the head. 45084 – Ophthalmic/otologic diagnostic set A collection of battery-powered devices intended to be used by a physician to perform an ophthalmic and/or otoscopic clinical examination on a patient. The devices are typically enclosed in a dedicated case and will typically include an ophthalmoscope and an otoscope, a dedicated interchangeable handle that contains the batteries which may be rechargeable and common to these examination devices, spare parts (e.g., extra ear specula, light bulbs) may include a line-powered charging station (e.g., desktop, wall-mounted) to house (charge these devices. This is a reusable device that may contain some disposable devices
EMDN Code:	Z12120114 – OPHTHALMOSCOPES Z12120118 – RETINOSCOPES Z12149006 – DIRECT OUTPATIENT OTOSCOPES Z12120199 – OPHTHALMOLOGY ASSESSMENTS AND DIAGNOSIS INSTRUMENTS – OTHER

We herewith declare, as the sole manufacturer, that the product(s) listed above and detailed in the attached Product Schedule meet the provisions of the Medical Device Regulation (MDR) 2017/745 of 5 April 2017 as amended, concerning medical devices and the applicable union legislation identified below

Applied Directives:	• Medical Device Regulation (MDR) - EU 2017/745 • Unique Device Identification (UDI) - 2013/172/EU • Restriction of Hazardous Substance (RoHS) 3 – 2011/65/EU • Waste Electrical and Electronic Equipment (WEEE) Directive – 2012/19/EU • MEDDEV 2.7/1 Rev. 4
